

Frequently Asked Questions

Quick Review & Audio Consultation

1. **What can I find in a Quick Review or Audio Consultation?** There is a potential information that can be discovered from names, locations, companies, weapons, networks, units, equipment, software, IT technology, and more. When you record, how you record, and the device you record with the information that can be collected from; hacking, tracking, tracing, stalking, honing, attacks, does make a difference if you are traveling, driving, walking, at home, at work, or outdoor activities.
2. **What is a quick review? What comes with the quick review report?** A quick review is a written transcript of identified information and communications that was captured within the analysis. There are different types of information that is collected that is used for investigation purposes. Report comes with written transcript of communications, timing locations, categorized outline of information, and spectrum images.
3. **What is an audio Consultation? What comes with the audio consultation?** Audio consultation discovers all the same information as the quick review. No Report. 1 hour phone conversation, review of any recordings, you can record the session if you choose, you get to ask questions. Helps with investigation purposes, review recordings before analysis to determine information, shielding insights, and more.
4. **What type of video or audio should I record? What should I record?** That information varies from examples and personal needs. I prefer videos on all accounts, but audio files work perfectly fine as well.
 - a) If you are being stalked, you may want to record while driving, where I can gather hacking, stalking, capabilities, towers, frequency hopping, locations, vehicle descriptions, orders, coms, etc.
 - b) If you are being attacked with different types of electronic devices or weapon systems then you need to record when they are attacking you, so I can gather information on networks, equipment, names, locations, software, hacking techniques, jobs, payroll, etc.
 - c) If you and your family is being child/human sex trafficked remotely through video voyeurism, and electronic means, you may want to record an audio file in the shower proving that they are watching you in a bath, or dressing in your room, changing the child's diaper, playtime, nap time, or a video of when you and your family are together at the dinner table. A form of action to prove the sexual actions, desires, and intentions of the hackers, stalkers, sex traffickers, and other criminal networks.

Frequently Asked Questions

Quick Review & Audio Consultation

5. **How do you prove V2K (Voice-to-Skull) technology, Direct Energy Weapons (DEW-Havana Syndrome), or Tinnitus?** Tinnitus can be proven through the musical tones, hums, vibrations, or other acoustical sounds that have been captured on both RAW and SAF side. V2K, question and answer session, with identification of software, equipment, and network information.
6. **What type of Devices can I use to record an audio or video file for analysis?** Anything digital can be used that records sound from a smartphone, camcorder, security camera, dash cam, go pro, video camera, camera (with sound), iPad, tablet, computer recording, etc....
7. **What type of format can the audio or video file be saved in?** The audio or video file should be saved according to your electronic device, which includes: .mov, .Avi, .mp3, .mp4, .wav, etc.... Best audio format is .wav and best video is .mov.
8. **What is a SAF review?** SAF stands for Subliminal Acoustic Fingerprinting and is the processed forensic portion of the audio or video file. SAF is the captured communications that are using subcarrier waves, radio frequencies on the negative decibel level. SAF gathers the information of the criminal's network system.
9. **What is a RAW Review?** RAW means the original audio or video file without the SAF forensic processing in the original format. This can prove various noises that SAF cannot, find from aerial noises/acceleration, pings, hums, animal noises, noise harassment, and more.
10. **What is a Summary?** A summary is an outline of information that was discovered within the audio or video file that was analyzed along with correlations to the information within the questionnaire. I do give out information and categorize each piece of information that was discovered within the report. The summary is a description and synopsis of all information collected as a whole.
11. **What are References?** References are links to information that was collected within the audio or video analysis. Links that correlate to the technology, equipment, companies, or any identifying information that can be connected. The links can include anything from articles, PDF's, documents, charts, graphs, information, regarding information.
12. **What is a File Name?** A file name is how the audio or video recording was saved. Anyone can name a file or change the name of the file at any time. Having the file name helps with keeping the information aligned with the file that is being analyzed.

Frequently Asked Questions

Quick Review & Audio Consultation

13. **How do I find the date the audio or video file was created?** You can access the file information within the properties tab. **Right click with the mouse, click > properties, Date Created.**
14. **What do you mean by electronic device, software, or application?** There are various ways to record an audio or video file, some use software like audacity, some use an application (app) like audio recorder, some use different types of electronic devices like a security camera system, cell phone, iPad, tablet, or handheld device.
15. **What do you mean by all known people?** Audio and video recordings vary, and are taken at different times, dates, and for different reasons. Having known people, animals, pets, and outdoor settings, I can separate the information from known too unknown. Voices will overlap and it is easier for me and the report writing purposes to know who is in the household, residence, workplace, or outdoor setting at that time the recording took place.
16. **Why do you need the description of what I was doing when the recording took place?** This is your time to tell your story on what is happening to you while the recording took place. What were you experiencing? What was happening to you? Describe what type of attacks were taking place, who was stalking you, harassing you, any information that you feel is important. This information can be added to the summary section of the report.
17. **Why is knowing the languages important?** I work globally, and only speak English, but the clients can speak multiple languages, with the criminals. Sometimes I can capture the foreign language aspects and it will be easier for me to identify, knowing what languages that you and the criminals speak.
